                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence of Homo sapiens cosmid clone U112E8 Unpublished (1999)
                                                                                                                                                                                                                                                                                                                                                                This clone is from a chromosome X-specific cosmid library LLOXNCC01 'U'. The source of the chromosomes was a human/hamster hybrid, GM07297-F, from Robert Nussbaum at the University of Pennsylvania School of Medicine. Please contact the Lawrence Livermore National Laboratory at http://www-bio.llnl.gov/genome to obtain the clone. VECTOR: Lawrist16.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer/because we provide a small overlap between neighboring data submissions.

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is rarbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /dev stage="fetal and adult"
/lab_host="DH10B (Life Technologies) (T1 phage resistant)"
/note="Organ: eye; Vector: pT773-Pac (Pharmacia) with a
modified polylinker; Site 1: BCOR I; Site 2: Not I;
UI-E-EJO is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT773-Pac
vector. The oligonuclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)ls tail. The
sequence tags for this library are: fetal eyes, AGAATCAAGA
ptic nerve, CCATTAAGTG; revenina, CCGCG, Retina Poveal and
Macular, GTCC; RPE and Choroid, ACCTA. This library was
created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI)."

//note="Organ: eye; Vector: p773-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I;
ur.E-EJO is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Pairst strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I; and cloned directionally into pT773-Pac vector. The oligonuclectide used to prime the synthesis of located between the Not I site and the (dT)1s tail. The sequence tags for this library are: fetal eyes, AGAATCAAGA optic nerve, CCATTAAGGT; rettina, CCGCG; Retina Poveal and created for the program, Gene Discovery in the Visual TAG LIBaUT-E-EJO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chorotic (dev stage="fetal and adult" /dev stage="fetal and adult" /dev stage="fetal and adult" /dev stage="fetal (life Technologies) (T1 phage resistant)" / Iab host="torgan: eye; Vector: pT7T3.Pac (Pharmacia) with a /modified polylinker; Site_1: EcoR I; Site_2: Not I; U1-E-EyO is a subtracted CDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac with Not I, and cloned directionally into pT7T3-Pac vector. The oligonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGAATCAAGA jense tags for this library are: fetal eyes, AGAATCAAGA optic nerve, CCATTAAGTG; retina, CCGCG; Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Choroid"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            optic nerve, retina,

UI-E-RJO is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT73-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes, AGAATCAAGA
ptic nerve, CCATTAAGTG; retina, CCGCG; Retina Foveal and
Macular, GTCC; RPE and Choroid, ACCTA. This library was
System, supported by National Eye Institute (NEI).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Equal amounts of plasmid DNA from five normalized libraries were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 5 libraries. The pools consisted of the following libraries and cloneIDs: Soares NDHSP pool 1: 190384-310919, 323208-325895 Soares NDHPP pool 1: 145032-147335, 147720-148103, 148872-149255, 15002 - 150407, 151176-152327 Soares NDHFPA-9W pool 1: 758280-760583, 772104-774407 Soares NDHPA pool 1: 758280-760583, 772104-774407 Soares NDHPA pool 1: 70076-306311, 320136,3228823, 326280-326663 Soares NDHOT pool 1: 723720-726407, 739080-740999 Subtraction by Bento Soares and M. modified polylinker; Site_1: EcoR I; Site_2: Not I;
UI-E-DXO is a cDNA library containing the following
tissue(s): fetal eyes. The library was constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is AGAATCAAGA. This library
was created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI)."

                                                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tissues and their corresponding proteins. The invention also relates to methods for assessing the expression level of these genes. The method is used for testing the predisposition of mammals and preferably humans for a heart disease or for an acute state of such a disease. It is also dilative cardiomyopathy, hypertrophic cardiomyopathy, ischaemic cardiomyopathy, specific heart muscle disease, rhythm and conduction disorders, myopathy, specific heart disease, rhythm and conduction disorders, the hypertension, pulmonary hypertension, pulmonary heart disease, systemic arterial hypertension, pulmonary hypertension, pulmonary heart disease, and conduction disorders, cheart disease, congenital heart disease, pericardial disease and the area of the invention are also used in gene therapy. A transgenic non-human mammal comprising the sequences of the invention are useful for the development for medicaments for the treatments of heart diseases. The present DNA sequence is expressed sequence tag

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the cDNA encoding the human chisel gene (Cs1)
C that is mapped to the human chromosome Xq21.3-q22. It comprises 5 exons.
C It is a member of the EF-Hand protein super family and is involved in comparison of the EF-Hand protein super family and is involved in comparison of the EF-Hand protein super family and skeletal comparison of the family and skeletal comparison of the maintain muscle homeostasis. This sequence can be used in the comparison of the family and the family and those involving aberrant muscle cell development and functional comparison of the family and in the treatment of muscular and myotonic dystrophies, skeletal myopathies such as Duchenne muscular dystrophy, and component and spectage of the myotonic dystrophies, heart failure, cardiac hypertrophy, and myocarditis, myofiber atrophy, etc. The Csl gene sequence can also be used in gene therapy, for the production of transgenic animals and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
